

Aaron's Contribution

Aaron was mainly responsible for developing the Matchmaking module, Preferences Page, and Watchlist. He implemented the logic that matches user preferences with relevant content, and ensured a clean interface with smooth interactions. In addition to his own tasks, Aaron frequently assisted other team members with debugging, code reviews, and feature troubleshooting, greatly improving overall development efficiency. He also took initiative in project coordination, including documentation setup, meeting scheduling, and task planning, helping the team stay organized and on track.

Estimated Time Spent: ~248 hours

Julian's Contribution

Julian worked on the Community module, Meetup system, User Profile Settings, and the Listing Page. He implemented key features such as posting, commenting, and event participation, and enabled profile editing. At the start of the project, Julian set up the initial project structure and development environment, laying the groundwork for the rest of the team. He also added several usability-focused features like password update and postal code validation. Throughout development, Julian paid close attention to interface consistency and visual detail, ensuring a unified look and feel across all modules.

Estimated Time Spent: ~246 hours

Mao's Contribution

Mao was responsible for the Seller Dashboard, Cat Profile, Chatbox, and Review System. He built tools for sellers to manage products and monitor activity, and designed detailed profile pages for listed cats to enhance readability and user trust. Mao also developed the real-time chat feature. Additionally, he implemented the review system, allowing buyers to leave ratings on sellers, which improves platform credibility. He maintained a strong focus on feature stability and data accuracy, and actively participated in integration testing across multiple modules.

Estimated Time Spent: ~244 hours

Qian's Contribution

Qian was responsible for the Homepage, Login System, Subscription Plans, and Payment Integration. She designed the homepage layout to clearly present the platform's core features. For user access, Qian implemented registration, login, identity verification, and error handling. She also built the subscription system, including tier management, renewals, and access control. Qian integrated a secure third-party payment solution to support online transactions and status tracking. Throughout development, she focused on the clarity and continuity of the user flow, ensuring a smooth experience from onboarding to payment completion.

Estimated Time Spent: ~242 hours
